Endangered animals

Polar bears

## Background information:

Living condition: Polar bears live on the glaciers and ice caps in North Pole. They feed on fish which are in the sea.

Only 22000 - 31000 left in this planet! We need to protect them and save the environment.

## Problem 1

## Global warming

Global warming made the temperature rises so the ice which is near the polar bears' habitat starts to melt. Therefore the polar bears will have fewer and fewer places to live.

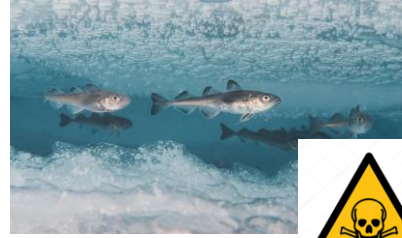

*Actions: We should reduce the emission of greenhouse gases so that Global warming won't be worser. Then the polar bears can have more places to live.*

## Problem 2

## Toxic waste and water pollution

People dump toxic waste into the sea so the fish eat the rubbish which contains high levels of toxic chemicals. If the mother bears eat those fish and feed their milk to the cubs, the cubs will be sick and poisoned.

**Actions: We should stop dumping toxic waste and chemicals into the sea. It is bad for the sea and the polar bears.**

## Problem 3      The oil and gas industry (business)

The oil and gas industry move near to the polar bears' habitat to exploit oil. The oil and gas spills and leaks into the sea so the sea is polluted. The polar bears can't drink any clean water.

Actions: Businessmen should stop exploiting oil and gas there.  
We can help by stop wasting energy.

The background is a solid pink color. In the top right corner, there are several overlapping geometric shapes in various shades of pink and magenta, including triangles and squares, creating a modern, abstract design.

I hope everybody  
can save the  
endangered  
animals and protect  
the environment.

*THANK YOU!*
